PROJECTS

Pixboard

An Image Board application that allows users to upload images, create image boards, search images, comment on images, like images, add images to their board, follow users, send messages to users, view their profile, edit their profile, delete images from board, delete a board, delete a comment, see their liked/created boards, see their liked/uploaded pix.

Commune

A community website with a reddit like interface.

Chess

A Multiplayer Chess game made using socket.io library.

WebDevGUI

Electron app that allows a user to create a webpage with simple drag and drop HTML functionality. This drag and drop feature will also be available for css classes and selectors. It would also allow users to add element based javascript without the need to get the DOM object before. I also want to add an image manipulation window in order to merge the process of web design and web development into one.

EDUCATION

Vivekananda Institute of Professional Studies, GGSIPU — *Bachelor of Computer Applications*

2017-2020 (Expected)
